

# Pediatric Hematologist

## **JOB DESCRIPTION**

The Division of Pediatric Hematology at the Johns Hopkins University School of Medicine is recruiting new full-time faculty members. The Division of Hematology is one of the few free-standing pediatric hematology divisions in the country. Board eligibility is required. The positions will entail 10-50% clinical activity and 50-90% research time, depending on the interests and seniority of the candidates. The candidates should have a focus in bleeding or thrombotic disorders. The successful candidates will have the opportunity to participate in the combined JHU/NIH Pediatric Hematology/Oncology training program, which selects 6 new fellows per year, as well as a hematology-only research training grant (T32). The research environment is exceptionally strong, with superb opportunities for collaboration within the Division, Adult Hematology and the institution at large. The Division of Pediatric Hematology administers the only Hemophilia and Thrombosis Center in the State of MD, with active Federal funding and a 340B program. Applicants should enjoy teaching and mentoring students, housestaff and fellows. An interest in laboratory-based investigation is preferred, but not required, and resources are available for developing a robust laboratory-based or clinical research activity in bleeding or thrombotic disorders. Excellent opportunities exist for clinical and scientific program building. Interested candidates should contact Dr. James F. Casella, Division Chief of Pediatric Hematology through the Division Manager, Phyllis Crockett (pcrocke1@jhmi.edu). Johns Hopkins University is an Equal Employment Opportunity institution; applicants to and employees of Johns Hopkins are protected under Federal law from discrimination.
