The National Heart, Lung and Blood Institute (NHLBI) Division of Blood Diseases and Resources (DBDR) is hiring a Physician Scientist at the GS 14 level!

The Division of Blood Diseases and Resources oversees discovery, translational, and clinical research programs across the blood sciences; assesses the Institute's national and international health programs related to all blood science disciplines and resources; develops and maintains the necessary scientific management capability in the Division to foster and guide effective programs in blood sciences and resources management; plans, coordinates, and directs special activities that transcend program lines, and oversees Divisional programs to support the workforce in non-malignant hematology.

The ideal candidate will have experience and breadth of knowledge across the field of non-malignant blood science including cell therapy, molecular and cellular hematology, hematologic pathology, regenerative medicine, transfusion medicine, vascular biology, with specialization in rare congenital blood disorders including hemophilia and other bleeding disorders and/or sickle cell disease. Sub-board certification in Hematology and/or Hematologic Pathology specialties would receive strong consideration.

Interested candidates should apply between June 26 and July 5 using the following link: https://www.usajobs.gov/GetJob/ViewDetails/535597200

Email W. Keith Hoots, M.D., Division Director, Division of Blood Diseases and Resources for more information, at hootswk@nhlbi.nih.gov.
