Recipient of HTRS/Novo Nordisk 2018 Mentored Research Award in Hemophilia and Rare Bleeding Disorders

Deepti M. Warad, MBBS
Assistant Professor of Pediatrics
Mayo Clinic

Mentor: Rajiv K. Pruthi, MBBS Co-Mentor: Matthew T. Drake, MD, PhD

Project Title: "Assessment of fracture risk with radiologic bone mineral densities and serological markers in children and young adults with bleeding disorders"

A National Merit Scholarship (Govt. of India) recipient, Dr. Warad completed medical school training from Dr. V. M. Govt. Medical College, Solapur, India. After completing pediatric residency training at the John H. Stroger Jr. Hospital of Cook County, Chicago IL, she joined the Pediatric Hematology Oncology fellowship program followed by a Special Coagulation Laboratory fellowship at Mayo Clinic, Rochester MN. She stayed on as faculty in 2014 with a focus on pediatric bleeding and thrombotic disorders. Dr. Warad's research project will help create a better understanding of the risk of osteoporosis in children and young adults with hemophilia A and von Willebrand disease using imaging studies such as high-resolution peripheral quantitative CT (HRpQCT), standard clinical dual-energy x-ray absorptiometry (DXA) imaging, serological measurement of bone turnover markers, in addition to other relevant biochemical and hormonal markers.
